| The Olarm PRO smart security communicator keeps you secure—even during load shedding. With simultaneous Mobile + WiFi signal routing, serious alerts are always delivered via the quickest possible connection for ultimate reliability. Olarm PRO seamlessly integrates with the world's most trusted alarm brands. The hardest part is locating your alarm panel (usually hidden in a cupboard somewhere!) Once connected, Olarm PRO automatically configures itself to your alarm panel settings. It's smart security, simplified. |                                                                                     |            |

| Polophone for easy installation. Connect up to 5 components (e.g. 1 entry panel & 4 handsets or 2 entry panels & 3 handsets), using only 2 wires. Connect the 12V DC supply to the nearest component in the system, either entry panel or handset. For instance if the entry panel is at the gate entrance with an operator that can provide 12V DC, connect the entry panel directly to this power. Alternatively plug in a 14V DC power supply into an electrical socket inside the building and connect this to the nearest handset |                                                                                                                                                                                         |            |

| This is a lock-up-and-go alarm system and does not require an existing alarm. It is a 9 input, 1 switched relay, LED and siren output device. You can arm or disarm the system via SMS, remote control or keyswitch. This device only requires a SIM card to work. The SMS Alert Alarm / Plus can be configured as a 2-way intercom system. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |            |
